

# Environmental Targets by 2030

During 2023 and 2024 we have been working to establish our environmental reduction targets to 2030, these targets have not yet been approved by the board, but they are in the final review.

# Environmental targets by 2030

## Climate, energy, and emissions

- Reduce energy consumption by 12% by 2030 compared to BAU (5.8% compared to 2022).
- Replace 50% of our own or managed vehicle fleet currently using fossil fuels with more eco-efficient alternatives (such as CNG, hybrid, electric, etc.).

## Water and effluents

- Reduce water consumption by 20% by 2030 compared to BAU (20% compared to 2022)
- Implement water efficiency plans in all facilities located in water-stressed areas.

## Waste and materials

- Reduce the proportion of waste sent to landfills to 45% (compared to 56.8% in 2022).
- Achieve that 80% of main premises recycle organic waste from food preparation in dining areas, thereby preventing the generation of greenhouse gases.

## Product Sustainability

- **Increase the % of purchase of next gen excavators, loaders and motor graders.**
- Achieve 15,000 tonnes accumulated from 2023 to 2030 of metal prevented from being discarded (certified reconstruction and overhaul programs).
- Achieve the annual goal for end-of-life tire valorization (NFU)

The main objective of all these actions is the reduction of the Carbon Footprint → **Decarbonization Plan**
